STREAMLINING IT PROCUREMENT: AUTOMATING STANDARD LAPTOP ORDERS WITH FLOW DESIGNER

PROJECT TESTING PHASE

1. Introduction

The Testing Phase is used to verify whether the automated Standard Laptop procurement workflow works as expected.

The project is tested by placing a Standard Laptop order, checking the approval process, verifying Flow execution, and confirming that the required Catalog Task is automatically created and assigned to the Hardware group.

2. Testing Objective

The main objectives of testing are:

- To verify the Standard Laptop catalog item.
- To verify that a Standard Laptop request can be created.
- To verify the approval process.
- To verify that the configured Flow is executed.
- To verify automatic Catalog Task creation.
- To verify the Short Description.
- To verify the Description.
- To verify the Hardware assignment.
- To verify the generated task status.

3. Test Environment

Platform: ServiceNow

Application: Service Catalog / Flow Designer

Catalog Item: Standard Laptop

Flow: Standard Laptop Task

Assignment Group: Hardware

4. Test Cases

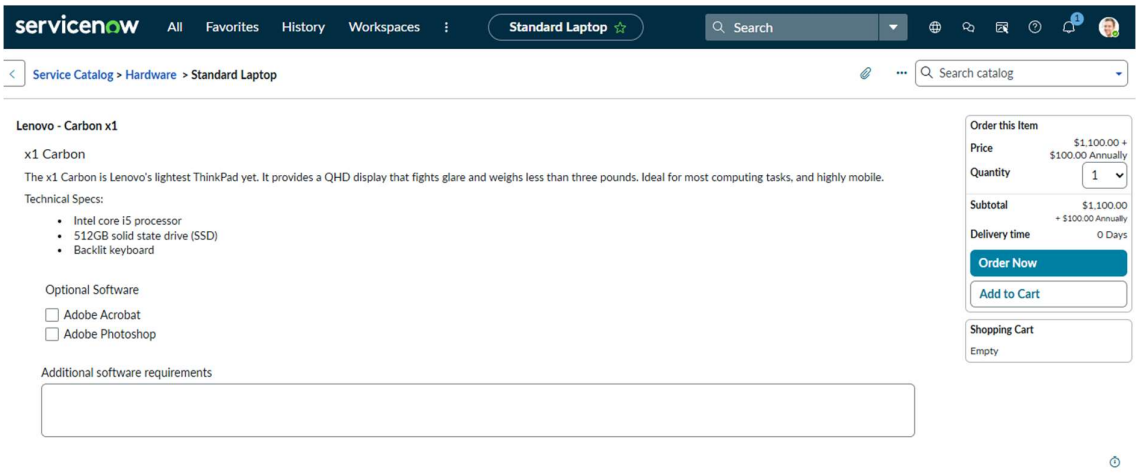

Test Case 1 – Standard Laptop Catalog Item

Objective:
To verify that the Standard Laptop catalog item is available.

Test Steps:

1. Open ServiceNow.
2. Go to Service Catalog.
3. Open Hardware.
4. Select Standard Laptop.

Expected Result:
The Standard Laptop catalog item should be available for ordering.

Test Case 2 – Standard Laptop Request

Objective:

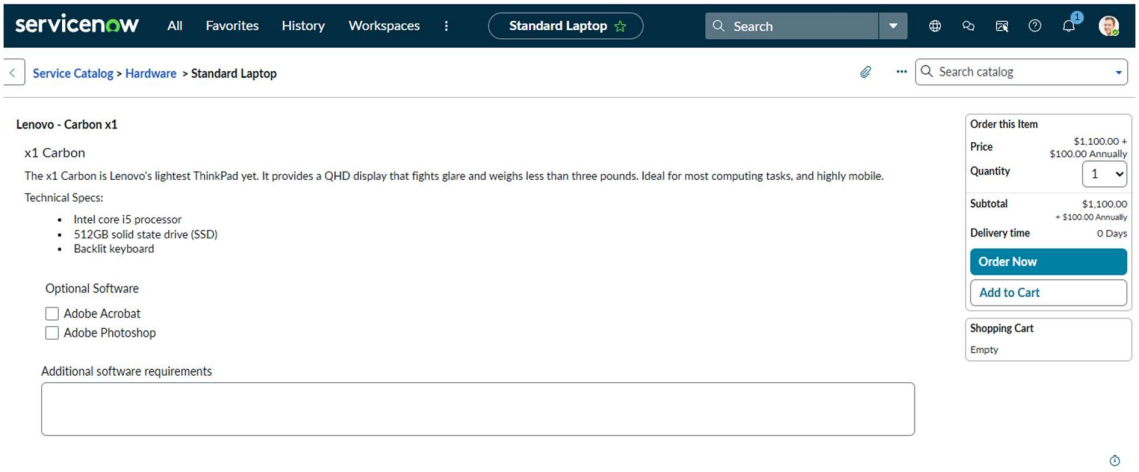

To verify that a Standard Laptop request can be placed.

Test Steps:

1. Open Standard Laptop.
2. Click Order Now.
3. Submit the request.

Expected Result:

A Standard Laptop request should be created successfully.

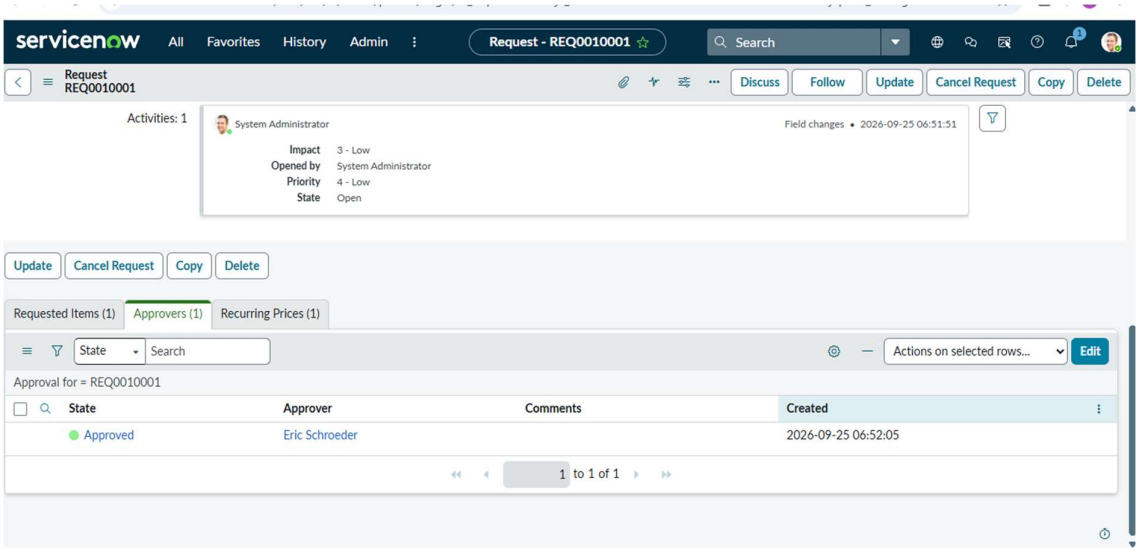

Test Case 3 – Request Approval

Objective:
To verify the approval process.

Test Steps:

1. Open the created request.
2. Open the Approvers section.
3. Approve the request.

Expected Result:
The request should be approved successfully.

Test Case 4 – Flow Execution

Objective:
To verify that the configured Flow executes after the required approval.

Test Steps:

1. Approve the Standard Laptop request.
2. Check the request and related records.
3. Verify whether the configured Flow processes the request.

Expected Result:
The configured Flow should execute successfully.

Test Case 5 – Catalog Task Creation

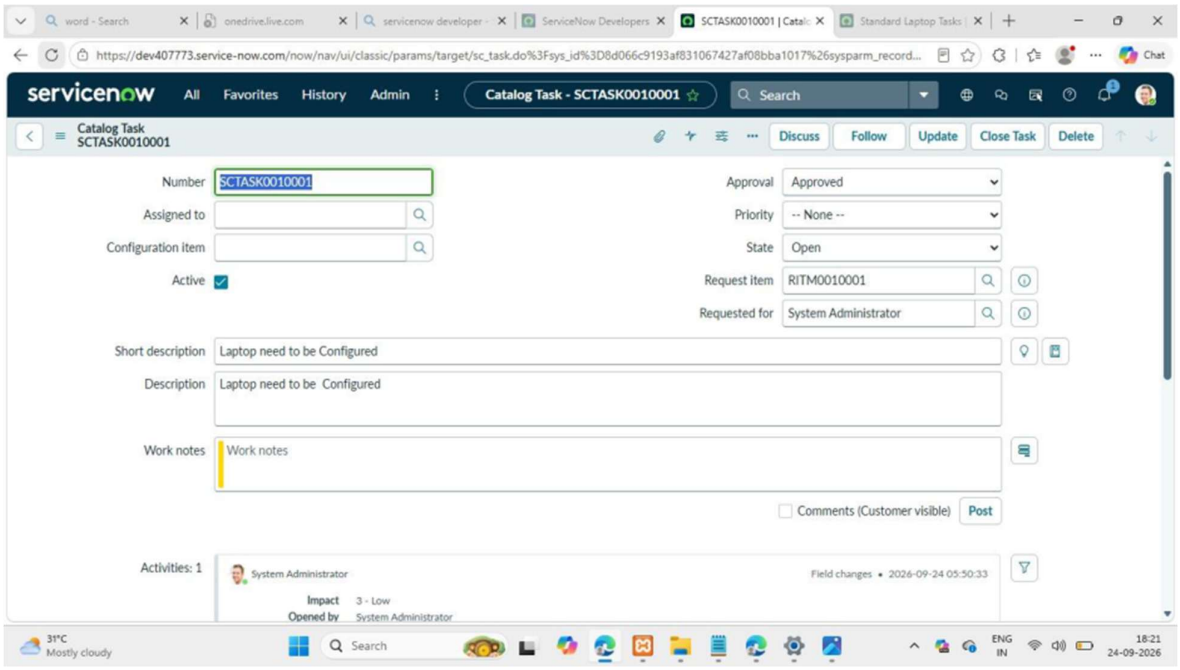

Objective:
To verify that a Catalog Task is automatically created.

Test Steps:

1. Open the Requested Item.
2. Open the Catalog Tasks section.
3. Check the generated task.

Expected Result:
A Catalog Task should be automatically generated.

Actual Result:

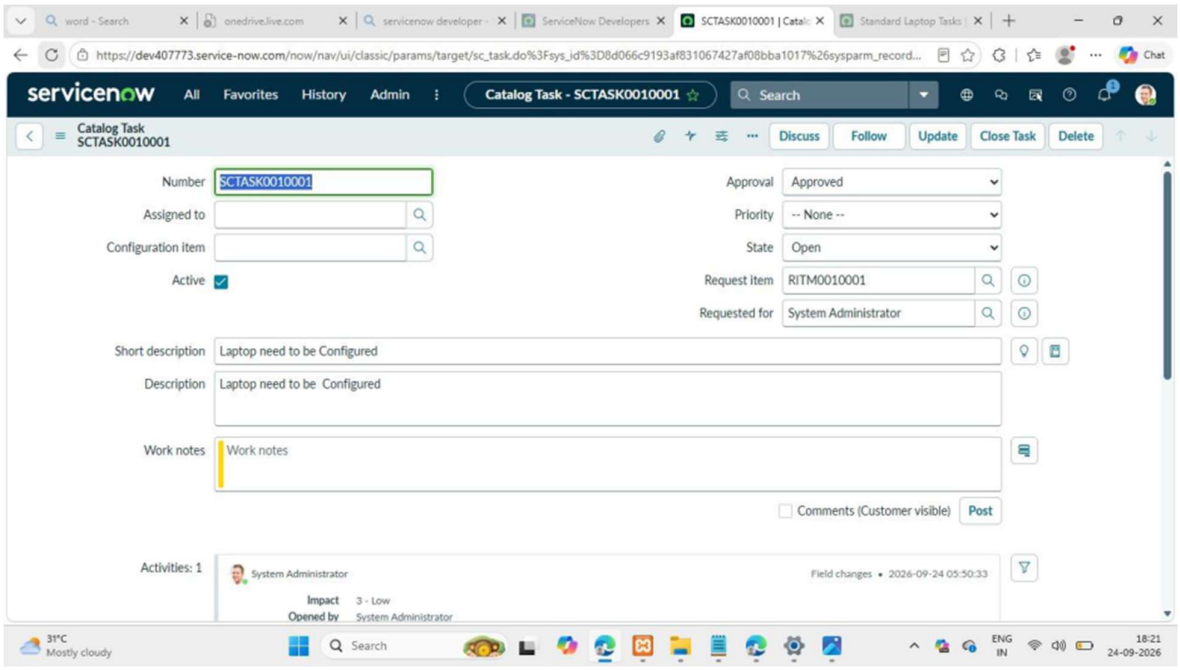

Test Case 7 – Description Verification

Objective:
To verify the Description of the generated Catalog Task.

Expected Result:
The Description should be:

“Laptop need to Configured”

Test Case 9 – Task Status Verification

Objective:
To verify the status of the generated Catalog Task.

Test Steps:

1. Open the generated Catalog Task.
2. Check the Task Status.
3. Verify the task details.

Expected Result:
The generated Catalog Task should display the appropriate task status along with the configured details.

5. Test Summary

Test Case	Test Description	Status
TC01	Standard Laptop Catalog Item	[Pass]
TC02	Standard Laptop Request	[Pass]
TC03	Request Approval	[Pass]
TC04	Flow Execution	[Pass]
TC05	Catalog Task Creation	[Pass]
TC06	Short Description	[Pass]
TC07	Description	[Pass]
TC08	Hardware Assignment	[Pass]
TC09	Task Status	[Pass]

6. Testing Evidence

Screenshots are captured during the testing process to provide evidence of the Standard Laptop order, approval, generated Catalog Task and its configured details.

8. Conclusion

The Testing Phase verifies the working of the automated Standard Laptop procurement workflow.

The testing covers the Standard Laptop request, approval, Flow execution, Catalog Task creation, task details and Hardware assignment. The actual test results and screenshots provide evidence of the implemented workflow.
